AirOne Solutions Would Like You to Meet **ROVER** Real-time Volunteer Emergency Response System

Reduce response time to save lives

ROVER is an innovative, cloud-based notification and response platform that provides all the tools needed to decrease response time. Take control of the first crucial minutes of an incident.

ROVER provides real-time answers to critical questions...to save time, save property, and save lives.

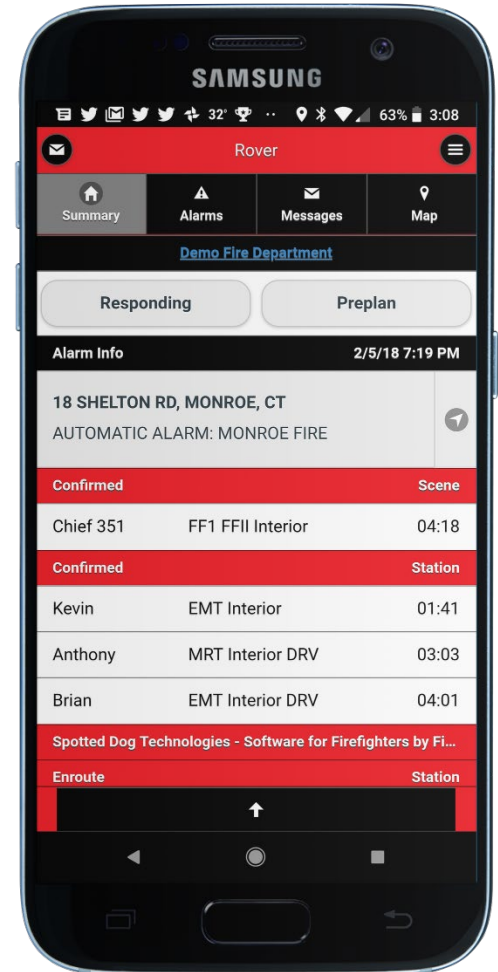

- Who has received the alert?
- Which responders are available?
- When will personnel arrive?
- How long should we wait?
- What resources are needed?
- Where is the incident located?
- What will we find at the location?

ROVER automatically sends the in-app, text, or email alerts to responders with complete incident information such as site details, water assets, hazards, maps, and navigation. Through one touch of their mobile device, responders can indicate their availability while **ROVER** instantly relays their location, credentials, and estimated time of arrival back to the incident command center.

Improve outcomes with faster, safer response

Once responders have confirmed their acceptance, **ROVER** provides everyone who has secure access to the **ROVER** portal (via station dashboard, laptop, in-vehicle tablet, or cell phone) with the precise location of each responder and a countdown to their arrival.

First responders can then focus 100% of their attention on getting safely to their destination. **ROVER** displays each member's ETA and tracks their position until they arrive at their destination so that gathering crew members can more effectively orchestrate the staffing and departure of vehicles and have critical information to determine if mutual aid is needed.

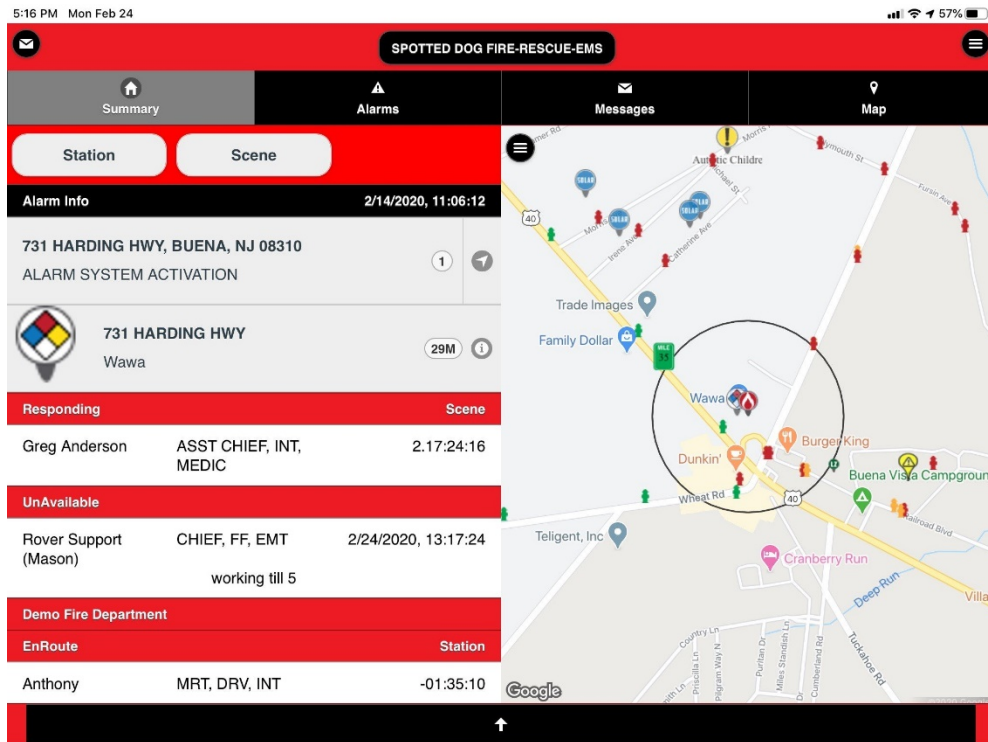

- Turn-by-turn navigation
- Unlimited users – you will never pay per license
- Works on any mobile device, tablet, and desktop
- Tracks each responder and apparatus in real time
- Access to pre-plans, water assets, and map objects
- Highly configurable to meet your agency's needs
- Works seamlessly with Emergency Reporting
- CAD integration and live updates* available
- Simple to setup, easy to use

**depending on CAD provider capabilities*

ROVER takes Responder Management to a new level

ROVER offers unique CAD/Map integration which provides users with critical information on the location of the incident. It can store and retrieve pre-plans on thousands of facilities and immediately provide important site data such as fire hydrant locations, characteristics of a buildings occupants (elderly/disabled), or the location of hazardous materials.

Easy Integration

ROVER integration is easy and seamless giving first responders greater access to vital information and the ability for information to be shared between agencies.

Better Resource Planning

Having information on all responders' availability, location and credentials helps incident command determine the need for secondary alerts and mutual aid.

GPS & Real-time Tracking

ROVER calculates the estimated arrival time of all responders and maps their location in real time as they move toward their destination.

Maximize Equipment

Understanding the arrival time of responders ensures that all vehicles are staffed appropriately before leaving the station.

Locate Water Sources and Hazards

ROVER provides access to hydrant maps and 1000's of pre-incident plans.

Google and WAZE Integration

Responders can get visual and audio turn-by-turn navigation from the app they are more familiar with.

Fully Customizable

We will work with you to customize **ROVER** to meet the needs of your department, with the terminology your team is most familiar with.

ROVER is a product of Spotted Dog Technologies, an Emergency Reporting company, and Fisch Solutions.
