AirOneAlert Enterprise Call Accounting

Centralized, Cradle to Grave Reporting, Telecom Analytics, Traffic Trends & more...

AirOneAlert Enterprise Multi-Site Call Accounting is for businesses and organizations with multiple locations that want to consolidate call data capture and reporting in one location. Call data can be consolidated or segregated. Reports can be produced manually or automatically and printed, faxed or emailed to your desired destination. Depending on your needs, both real-time and buffered configurations are available.

A Hotel/Motel version is also available for multi-site clients. Call data is processed and stored centrally and can be optionally transmitted to your onsite Property Management System (PMS) for consolidated billing.

For ease of installation, if your telecom equipment is not IP-ready AirOne Solutions Group can supply an optional IP conversion device.

AirOneAlert Enterprise versions include all the great features found in our Express Series and Professional Series versions. Contact AirOne Solutions Group for a customized solution.
